

## São Paulo International Schools on Theoretical Physics

# School on Random Geometry and Random Matrices

August 25 - September 5, 2014

Instituto de Física Teórica - UNESP - São Paulo, Brazil

Models of random geometry and random matrices have wide applications, ranging from quantum gravity and string theory to complex networks and biological applications. In this interdisciplinary school, some of the world's leading experts will give an overview of these diverse areas. The school is intended for graduate students and researchers in the fields of high energy physics, statistical physics and probability theory, and will be followed by a short workshop.

### Lecturers:

**Jérémie Bouttier** (Saclay)

Recent developments in random planar maps

**Zdzislaw Burda** (Jagiellonian University)
